

PROJECT INDIA

Energy America completed the construction of PV plants in India, an 11 MW power plant located in the Calcutta.

The subsequent operation and maintenance (O&M) services will be managed by EA as well. The project is a result of a strategic agreement between EA and local power authority.

The plant was built using First Solar modules, which use CdTe thin-film technology to allow for greater efficiency at high temperatures and during hours of low sun exposure.

Owner:

National utility

EPC Contractors:

Energy America Inc

Type:

GROUND MOUNT-FIXED

Project Size

11MW (AC)

Homes Powered

5,000

Tons CO₂ Displaced Annually:

8,900 tons
